

## Compare numbers with 1 decimal place.

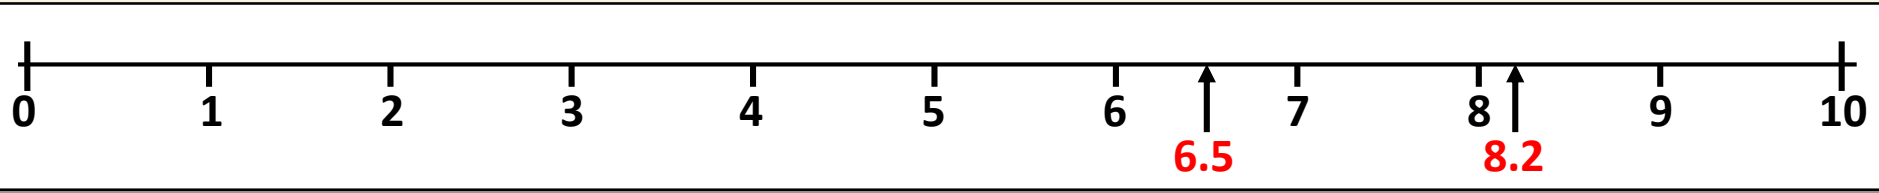

Which is more, **1.2** or **2.1**?  
What **whole number** lies  
between?

We can place both  
numbers on the  
number line to check.

$$2.1 > 1.2$$

The **whole number**  
between them is 2.

# Compare numbers with 1 decimal place.

Let's play  
*Higher or Lower.*

Imagine rolling a 0-9  
dice four times, writing  
each digit into this grid.  
Once it's placed you  
can't move it!

Is our number  
sentence  $8.2 > 6.5$   
correct?

$$8.2 > 6.5$$

First roll is an 8.

Second a 6.

Next a 5.

Lastly a 2.

We can check on the  
number line.
